

EuroPython 2009

Python and it's furure on the web and the cloud

The international conference EuroPython 2009 is being held in Birmingham, UK, June 28-July 4. EuroPython is a conference all about the [Python programming language](#), it's aimed at the Python community: Python users and programmers, of all skill levels. EuroPython is the born cool Python conference.

Valentine Web Systems will be represented at EuroPython 2009 by company founder Sasha Vincic who will attend the conference this year. Sasha Vincic is looking very much forward to the EuroPython 2009 conference to get to learn more about what is going on in the wonderful world of Python. Cloud computing and web are interesting subjects too.

Meeting old friends who also attends EuroPython 2009 is another highlight. Like Matt Hamilton from Netsight Internet Solutions who is giving the "Lipstick on a Pig" talk about using Deliverance to skin third party system. Or Bernd Dorn from Lovely Systems with the talk "Real World App Engine Projects" about how to get the best out of App Engine, and related technologies such as Bigtable, Amazon S3, EC2 and Cloudfront. There will of course be many more familiar faces to meet in the crowd, be sure about that.

There are a big number of talks that look really interesting to a happy Python fanatic from Sweden, such as Reliable Python Web Sites, Semantic Apps With CubicWeb, Tapping Into The Web Of Data, The Zen Of Pyjamas and Castles In The Cloud.

The week in Birmingham will be a joyride beyond all borders. See you there!
